

Components overview

Kore Nordmann <kn@ez.no>

eZ Systems

May 6, 2009

Outline

The document component

The graph component

The goal

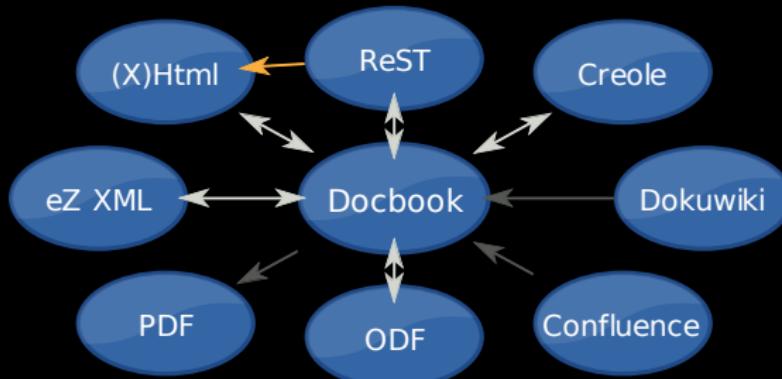

- ▶ Support conversions between document markup formats
- ▶ Applications in content management
 - ▶ Different input mechanisms
 - ▶ WYSIWYG editor (HTML)
 - ▶ Simple text editor (wiki markup)
 - ▶ Emails (ReST)
 - ▶ Different output formats
 - ▶ Web frontend (HTML)
 - ▶ Technical documentation management (Docbook)
 - ▶ Print (PDF)

The formats

- ▶ Currently supported formats
 - ▶ Docbook
 - ▶ (X)Html
 - ▶ eZ XML
 - ▶ ReST
 - ▶ Wiki
 - ▶ Dokuwiki, popular PHP based wiki (wiki.php.net) (read-only)
 - ▶ Creole, wiki markup standardization initiative
 - ▶ Confluence, Apache Atlassian wiki dialect (read-only)
- ▶ Currently in development
 - ▶ PDF (write only)
 - ▶ ODF

The architecture

- ▶ Docbook as central conversion format
 - ▶ Possible conversion shortcuts
 - ▶ Conversions always configurable and extensible

The code

- ▶ Simple example application converting between “all” formats.
- ▶ Code available at: <http://svn.ez.no/svn/ezcomponents/docs/examples/applications/DocumentRoadShow>

Outline

The document component

The graph component

The goal

- ▶ Create a chart (graph) library, which focusses on:
 - ▶ Easy to use, simple API
 - ▶ Customizable output, fit your design (palettes, 2D- or 3D-renderer)
 - ▶ Different output formats (PNG, Flash, SVG)
 - ▶ Handling of various types of data

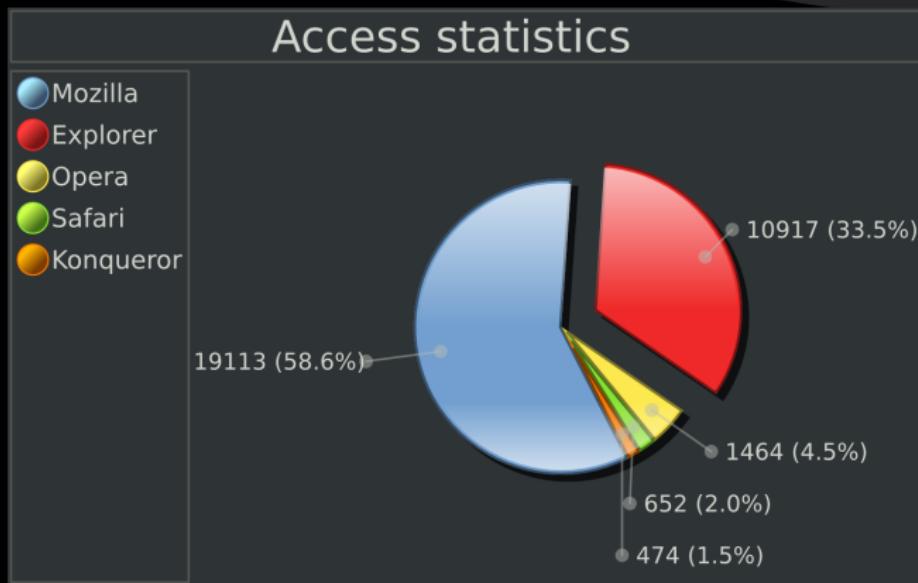

An example

► Creation of a simple pie chart

```
1 $graph = new ezcGraphPieChart();
2 $graph->palette = new ezcGraphPaletteBlack();
3 $graph->title = 'Access_statistics';
4
5 $graph->data[ 'Access_statistics' ] = new
6     ezcGraphArrayDataSet( array(
7         'Mozilla' => 19113,
8         'Explorer' => 10917,
9         'Opera' => 1464,
10        'Safari' => 652,
11        'Konqueror' => 474,
12    ) );
13 // Pimp...
14 $graph->render( 400, 250, 'pie_chart.svg' );
```

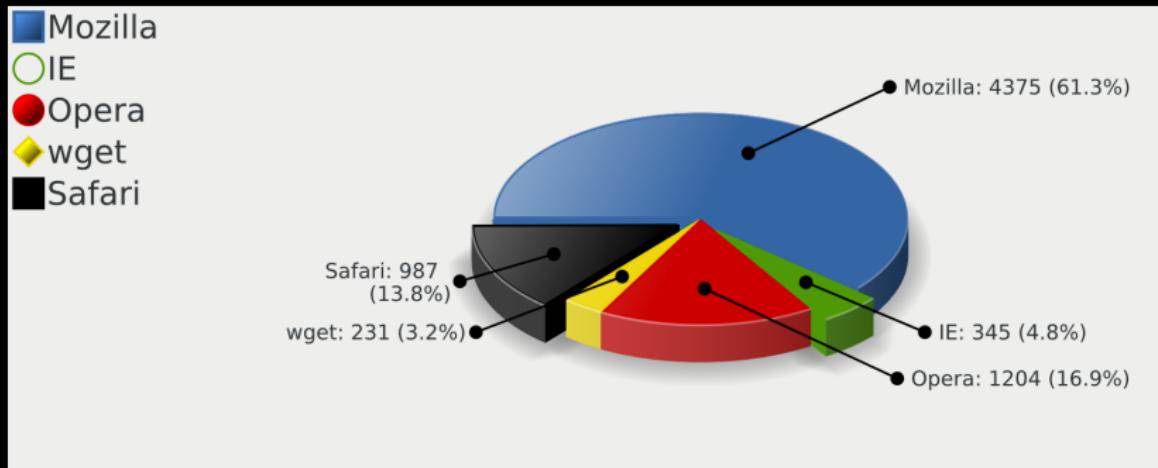

The result

- ▶ Includes some extra pimping...

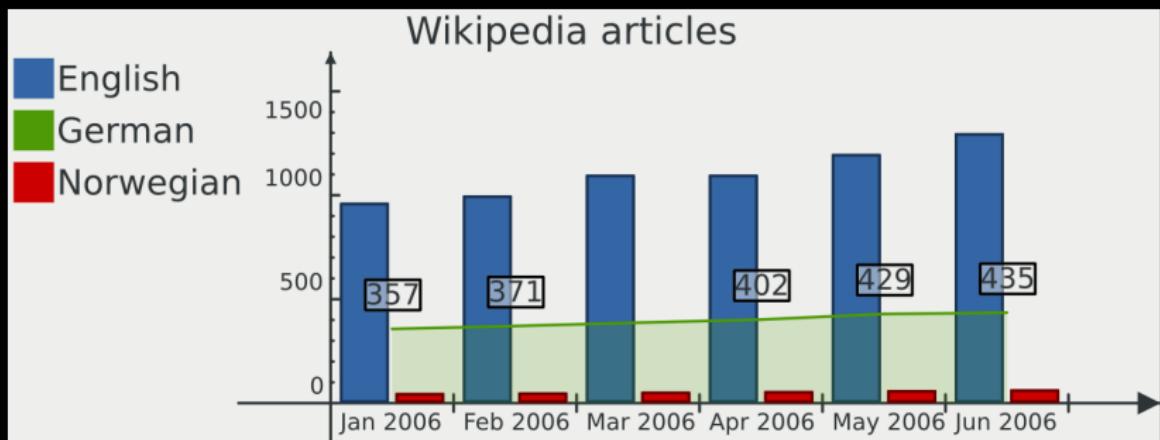

Another example 1/4

- ▶ A pie chart in 3D

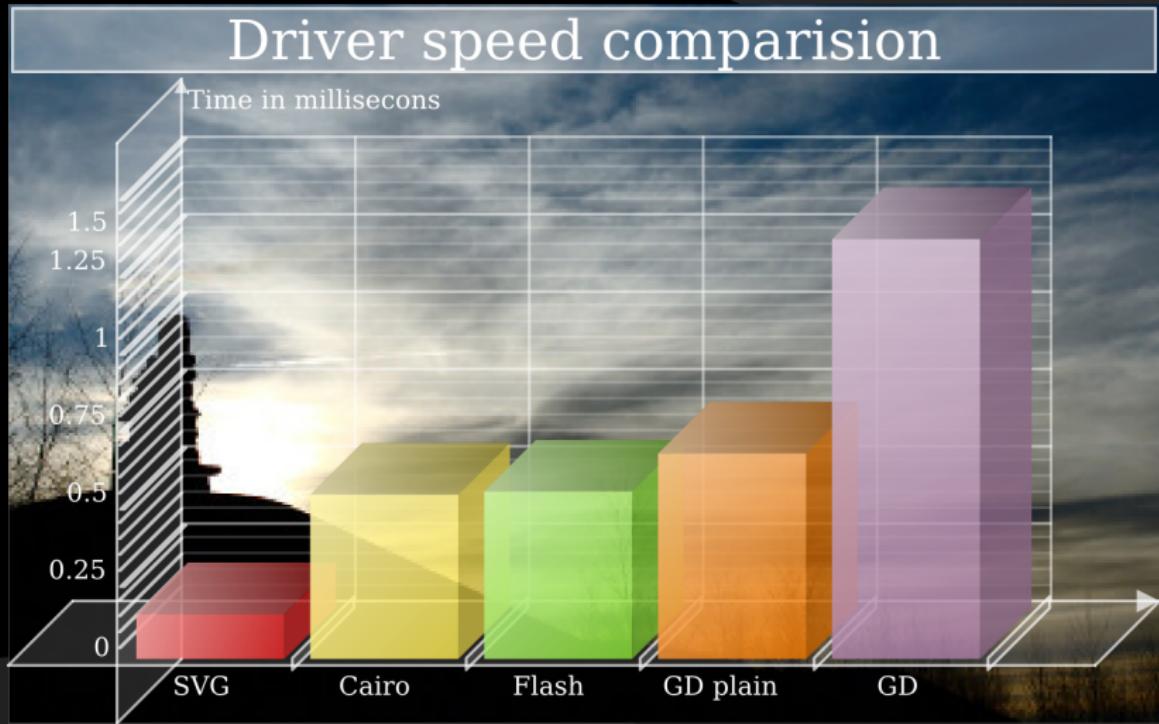

Another example 2/4

- ▶ A combination of bar and line charts

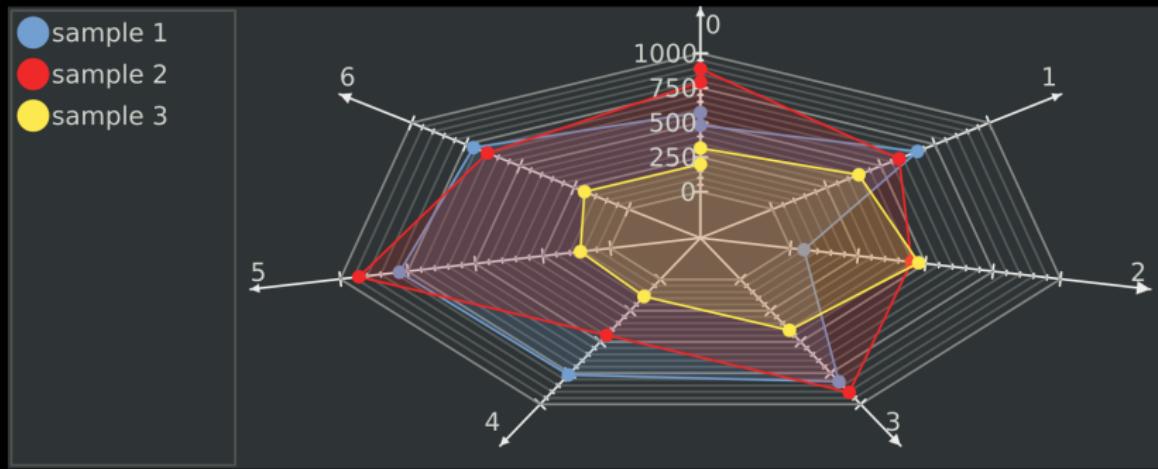

Another example 3/4

- ▶ A heavily styled 3D bar chart

Another example 4/4

► A simple radar chart example

Feature overview

- ▶ Different chart types
 - ▶ Line chart, pie chart, bar chart, radar chart, odometers
- ▶ Different axis types
 - ▶ Labeled axis, DateTime axis, Numeric axis, Logarithmic axis
- ▶ Different data set types
 - ▶ Array data set, mathematical function, PDO data set, polynomial interpolation
- ▶ Customization
 - ▶ Style every chart element
 - ▶ Use palettes with predefined styles
